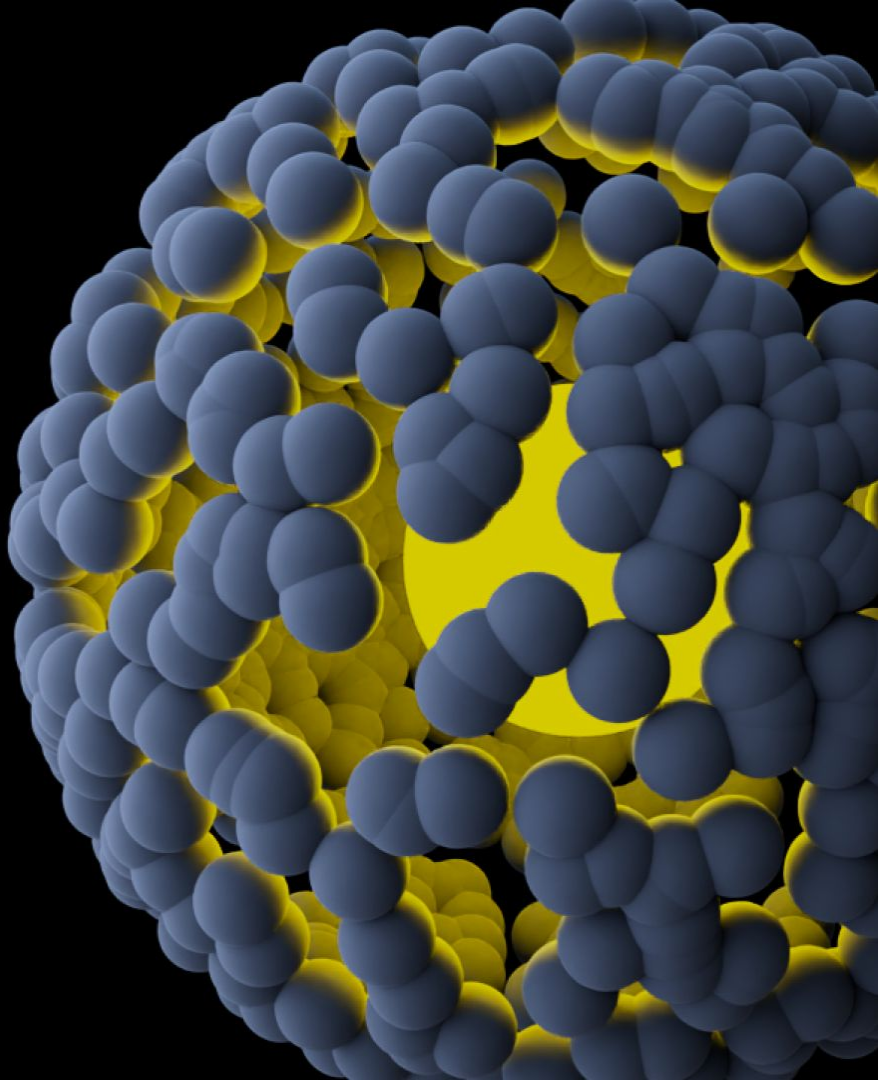
CORE·3

QUANTIFY RISK. ELEVATE TRUST.

The Risk Infrastructure for Web3



The Problem

Digital Asset Markets lack Risk Infrastructure

CORE·3

Traditional Financial Markets

Standardized risk infrastructure exists:

- Credit ratings (Moody's, S&P)
- Counterparty risk monitoring (CDS, exposure systems)
- Institutional risk frameworks (Risk committees, credit scoring model)

Digital Assets Markets

Equivalent infrastructure is still missing.

- No standardized risk ratings
- Limited solvency transparency
- Inconsistent disclosure
- Fragmented risk data

The Problem

Web3 Lacks Reliable Risk Signals

CORE·3

Subjective Due Diligence Models

Methodology Void

Market participants often rely on qualitative “vibes” rather than standardized, data-driven risk frameworks.

Fragmented Data

Risk signals are fragmented across platforms, resulting in incomplete and inconsistent assessments of entity risk.

Conflicts of Interest & Bias

Misaligned Incentives

Trust signals are often influenced by paid placements, marketing partnerships, or undisclosed incentives.

Selective Disclosure

Projects frequently highlight positive indicators while critical risks remain hidden.

Hype Over Substance

Sentiment over Solvency

Popularity and social momentum are often mistaken for financial stability.

Monetized Influence

Capital allocation is frequently driven by promotional narratives rather than objective risk signals.

Why Now

The Tipping Point for Web3 Risk Infrastructure

CORE·3

Institutional Entry

Funds, banks, and asset managers require structured risk evaluation frameworks

Regulatory Pressure

Global regulators are demanding stronger transparency, solvency reporting, operational risk controls, and market integrity standards across digital asset markets.

Market Failures Exposed Structural Risk

Major collapses and security breaches have exposed the absence of standardized risk monitoring and due diligence infrastructure.

Together, these forces are driving demand for independent risk infrastructure.

Our Experience

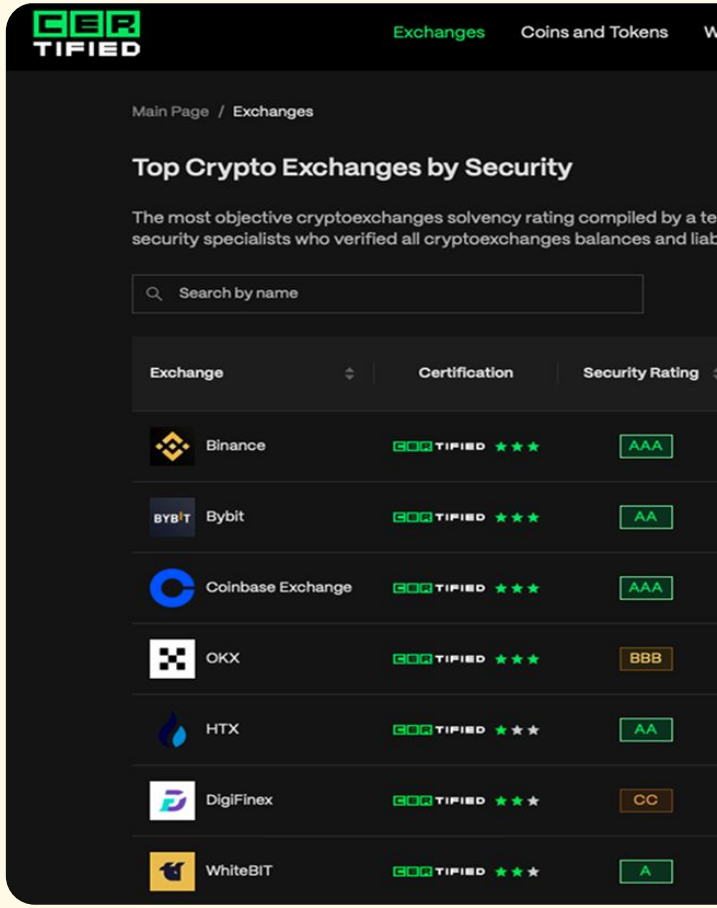
CER.live - Cybersecurity Ranking & Certification Platform

CER.live provides transparent security ratings (AAA–D) for exchanges and platforms, evaluating penetration tests, bug bounty participation, Proof-of-Reserves status, ISO-27001 compliance, cold-storage management , and past incidents

1. Integrated into coingecko
2. 290 Exchanges evaluated
3. Open Source Methodology
4. Community validation
5. 2,222 Tokens & Coins Evaluated
6. Constant Improvement

Achievements:

- 500+ security certified CEXes
- 196 crypto wallets variants security analysis
- Unique security rating methodology verified by cybersecurity experts



Our Experience

Raising Standards for Web3

CORE·3

CoinGecko CoinMarketCap A3 ADGM

CER.live Global Security Benchmark for Exchanges

- Launched 2018 as one of the first CEX security scoring system
- 18+ indicators: PoR, wallets, incidents, and insurance
- Drove industry-wide improvements in security practices
- Adopted by exchanges such as Bybit, KuCoin, and Gate.io as a public trust signal

Proof-of-Reserves Before It Became Standard

- Introduced PoR as a core transparency signal as early as 2019
- Encouraged regular reserve disclosures through audit-driven frameworks
- Anticipated the post-FTX shift toward transparency
- Established accountability by penalizing opacity

Regulatory-Grade Risk Infrastructure

- Built A3 dashboards for real-time risk monitoring, alerts, and incident tracking
- Adopted by ADGM (Abu Dhabi) and EU blockchain pilot programs
- Enabled continuous supervision without direct enforcement

The Solution

Traction & Progress

CORE3 builds on existing infrastructure, industry relationships, and datasets developed through CER.live.

Exchange Security Dataset

Comprehensive exchange security dataset from CER.live

Industry Relationships

Existing relationships with major global exchanges

Proof of Reserves Dataset

Access to transparency and reserve verification data

Ecosystem Partnership

Existing CER.live integration across Web3 ecosystem

Platform Development

Pilot released in December 2025

The Evolution

CORE3: Building the Risk Infrastructure Layer for Web3

CORE·3

Risk Data Distribution

- API
- Ecosystem Integration

Risk Intelligence Platform

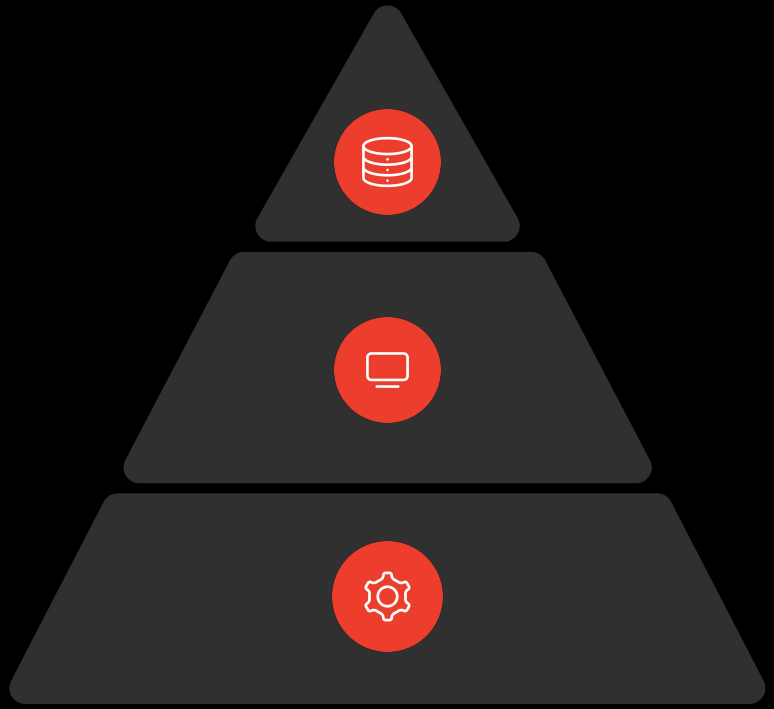
- Monitoring & Analytics
- Public Entity Profile

Risk Engine

- Probability of Los (PoL)
- Risk Models



Risk Infrastructure

Probability of Loss (PoL): The Risk Engine

CORE3's Probability of Loss (PoL) establishes a **standardized risk metric** for digital assets.

PoL aggregates dozens of on-chain and off-chain indicators into a forward-looking score that **quantifies the likelihood of financial loss.**

Unified Risk Standard

One Global Benchmark

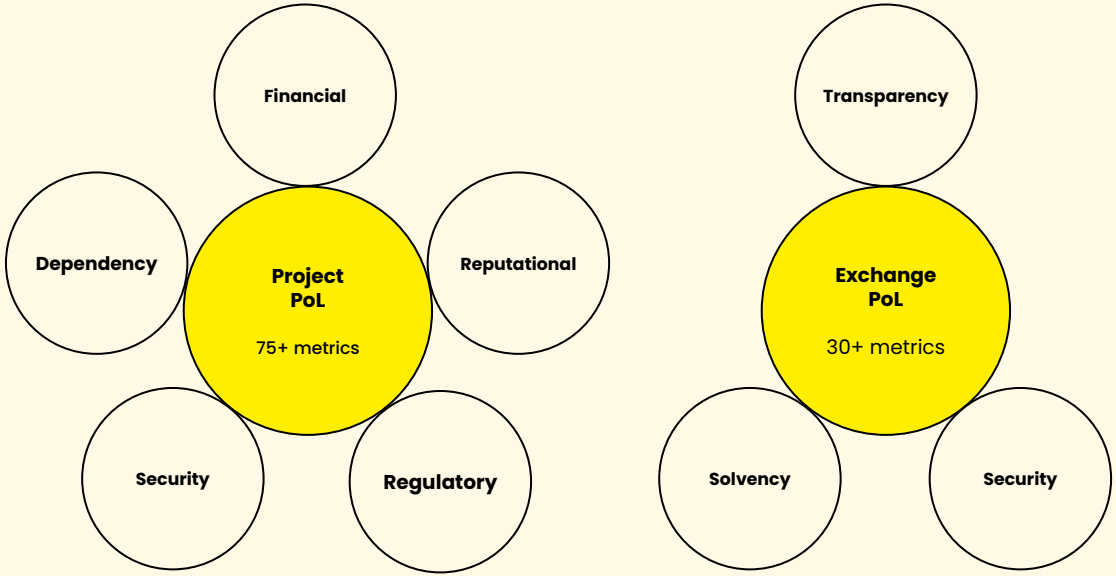
Data-Driven Oversight

128+ verifiable risk indicators

Dynamic Risk Scoring

Scores update as underlying risk indicators change

CORE3 Risk Dimensions



Risk Infrastructure

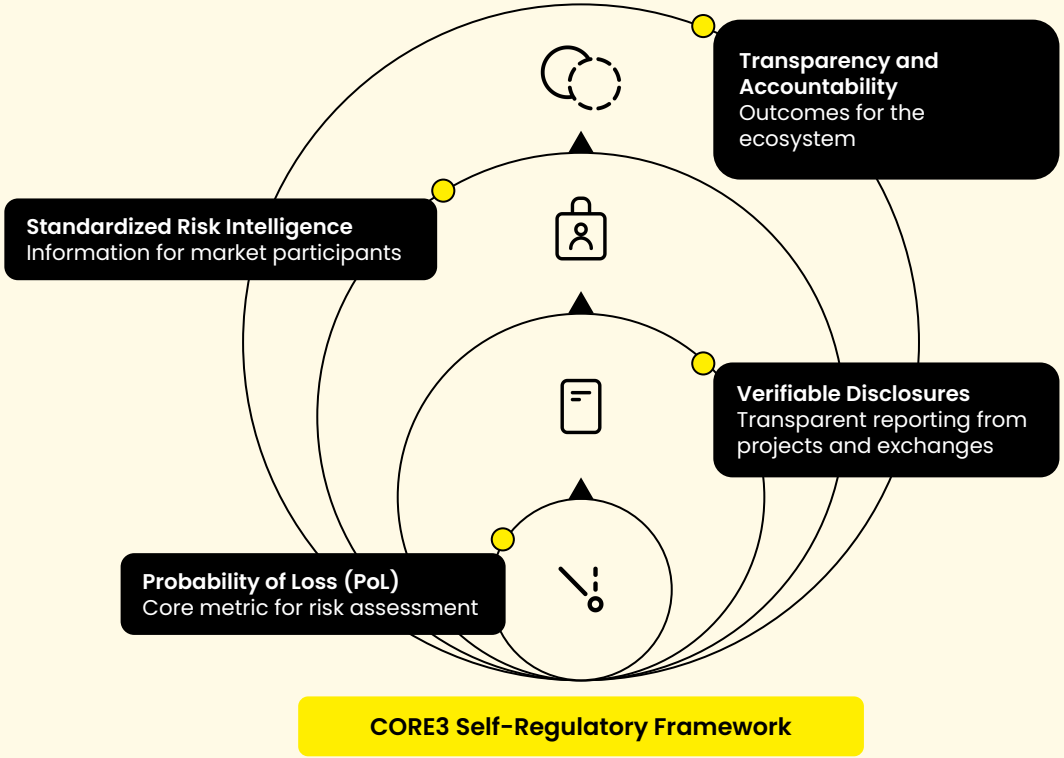
Enabling Transparency & Driving Accountability

CORE3 applies Web3's decentralized ethos to introduce an **open, self-regulatory risk framework.**

Built around the Probability of Loss (PoL) metric, the framework combines **verifiable disclosures including on-chain and off-chain indicators** from projects and exchanges to produce standardized risk intelligence for the ecosystem.

Because risk scores and indicators are **publicly visible**, projects and exchanges are **incentivized to improve transparency** by submitting verified disclosures.

This **creates market pressure to strengthen security, solvency, and governance standards** across the ecosystem.



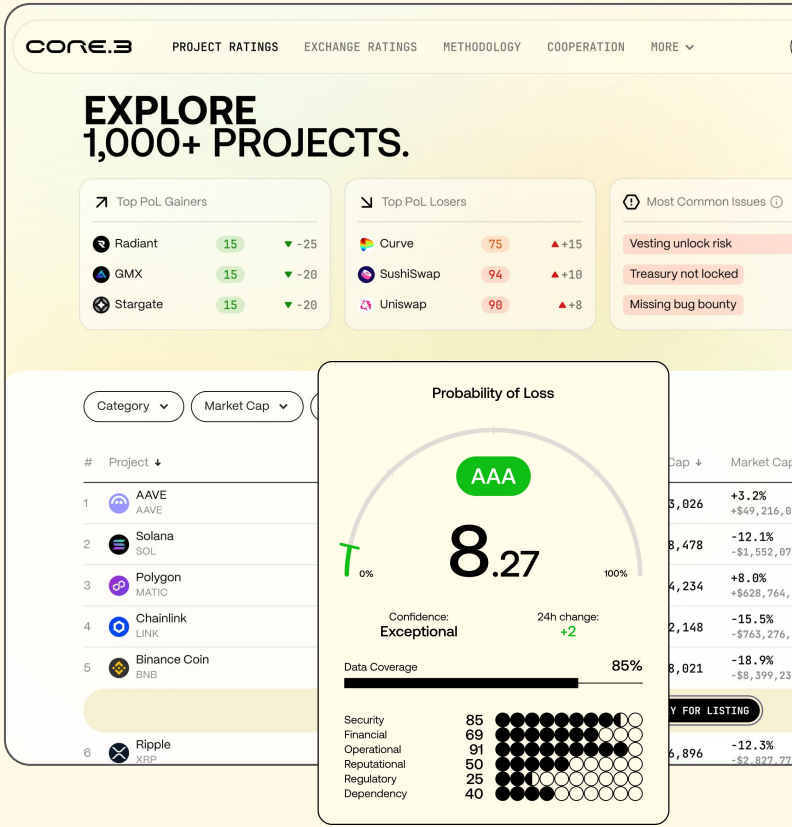
Risk Infrastructure

Risk Intelligence Platform

CORE·3

CORE3 transforms **raw risk signals into actionable intelligence:**

- **Unified Risk Dashboard**
  Explore and compare risk profiles across projects exchanges, and protocols.
- **Real-Time Monitoring**
  Continuous updates track risk changes as new data and signals emerge.
- **Transparent Risk Profiles**
  Clear sub-scores across all risk metrics.
- **Improvement Insights**
  Actionable recommendations that help entities improve their risk standing.



Our Vision

Establishing the Risk Infrastructure for Digital Assets

CORE·3

CORE3 Integration Across the Web3 Ecosystem

Exchanges

Assess listed assets risk and provide transparent risk signals of users.

Wallets

Surface risk warnings and trust signals before users interact with assets.

Funds

Portfolio risk analysis, due diligence, and exposure monitoring.

Insurance

Evaluate underwriting exposure and price digital asset risk.

Aggregators

Enrich market analytics with standardized risk indicators.

Regulators

Support oversight and compliance monitoring with independent risk data.

Our Moat

Building the Web3 Risk Dataset

CORE3 **continuously aggregates and standardizes risk signals** across exchanges, protocols, and digital assets.

Over time this **builds a proprietary risk intelligence dataset** that becomes increasingly difficult to replicate.

CORE3's Strategic Advantages

Standardized Risk Framework

Normalized indicators that enable consistent comparison across entities.

Historical Risk Intelligence

Long-term data on incidents, disclosures, and operational behavior.

Network Effects

As more entities integrate CORE3 scores, the dataset becomes the industry benchmark.

Cross-Market Coverage

Risk signals across exchanges, protocols, and assets.

2026 Roadmap

Expanding the CORE3 Risk Framework

CORE·3

Q4 – 2025

December
Demo Release
PoL Scoring on initial sample

Q1 – 2026

March
Platform Launch
Public release

Q2 – 2026

Quality of Assets
New aggregate metric measuring the PoL across all assets listed on an exchange, providing an assessment of overall asset quality and risk exposure

Incident Response
Evaluation of exchange response and resolution time for customer-reported issues.

Q3 – 2026

DEX PoL
Risk evaluation for decentralized exchanges based on security, risk exposure, and protocol-level factors.

Yield PoL
Risk evaluation for yield vaults based on loss exposure across smart contract security, strategy design, liquidity conditions, and protocol dependencies.

AI Automation
Live data gathering and analysis

Q4 – 2026

Stablecoin PoL
Risk evaluation for stablecoins based on security, risk exposure, and protocol-level factors.

This year, CORE3 aims to expand its PoL framework and datasets to **deliver broader, deeper risk intelligence** across the Web3 ecosystem.

Market Opportunity

CORE·3

Revenue Type	Annual fees	Target Clients	TAM Quantity Assumption	2026 TAM	Market Penetration Assumption	CORE3 Revenue at 5% Market Penetration
Risk Intelligence Enterprise Subscription	$ 75, 000	Digital assets funds, hedge funds	2,000	$ 150,000,000	5%	$ 7,500,000
Risk Intelligence Enterprise Subscription	$ 75, 000	Neo banks	300	$ 22,500,000	5%	$ 1,125,000
Risk Intelligence Enterprise Subscription	$ 125,000	Exchange and brokers	500	$ 62,500,000	5%	$ 3,125,000
Risk Intelligence Enterprise Subscription	$ 5,000	Individual traders	100,000	$ 500,000,000	5%	$ 25,000,000
Yield Risk Scores	$ 25,000	RWAs and stablecoins	500	$ 12,500,000	5%	$ 650,000
Priority Listings	$ 3,000	New crypto projects	10,000	$ 30,000,000	5%	$ 1,500,000
API Sales	$ 30,000	Crypto aggregators, digital wallets, brokers	100	$ 3,000	5%	$ 150,000
				$ 780,500,000		$ 39,025,000

Multi-Channel Revenue Streams

- Risk intelligence subscription – digital assets funds and individual traders annual subscription for risks insights, analysis and notifications
- Priority listing – revenue from projects priority data validation and listing
- API sales – unique datasets sales to aggregators, wallets, trading platforms
- Yield risks scores – on demand RWAs, stabelcoins and other yield providers yield audits and live monitoring
