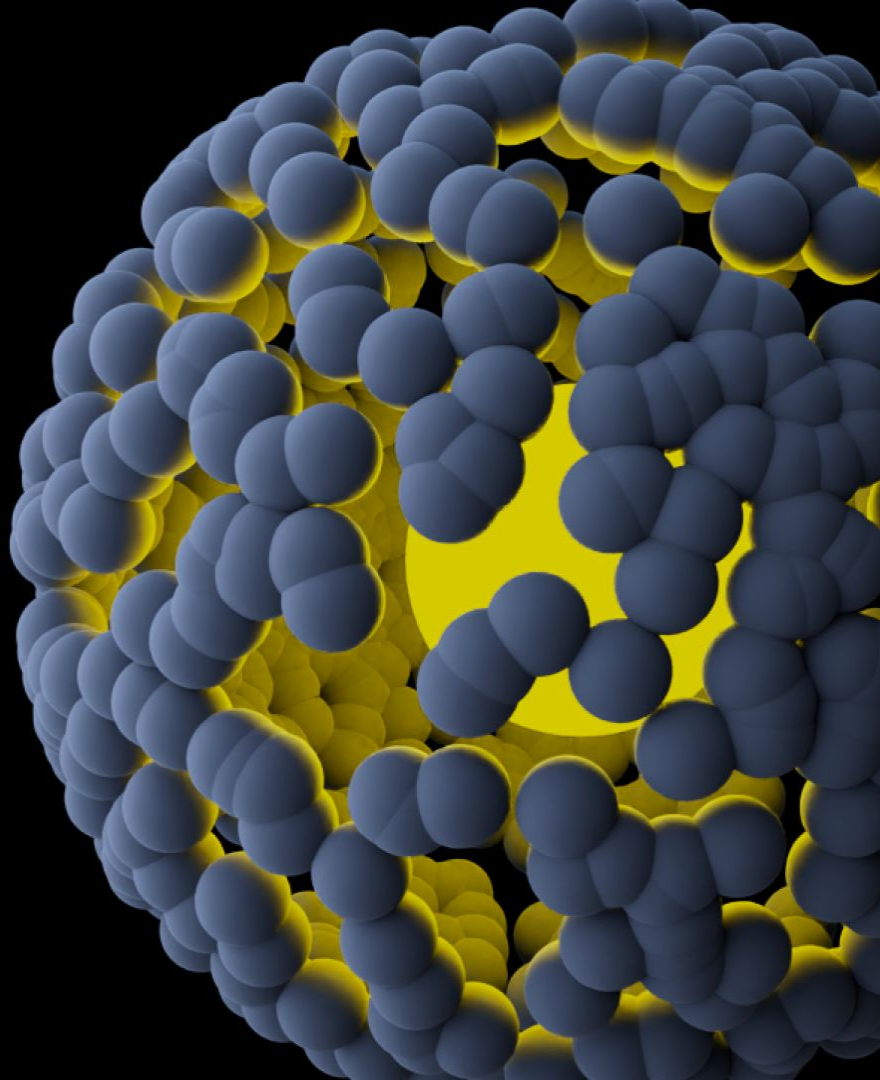
CORE·3

QUANTIFY RISK. ELEVATE TRUST.

The Risk Infrastructure for Web3

Track: 50Partners Web3

Team: CORE3



The Problem

Digital Asset Markets lack Risk Infrastructure

CORE·3

Traditional Financial Markets

Standardized risk infrastructure exists:

- Credit ratings (Moody's, S&P)
- Counterparty risk monitoring (CDS, exposure systems)
- Institutional risk frameworks (Risk committees, credit scoring model)

Digital Assets Markets

Equivalent infrastructure is still missing.

- No standardized risk ratings
- Limited solvency transparency
- Inconsistent disclosure
- Fragmented risk data

The Solution

CORE3: Building the Risk Infrastructure Layer for Web3

CORE·3

Risk Data Distribution

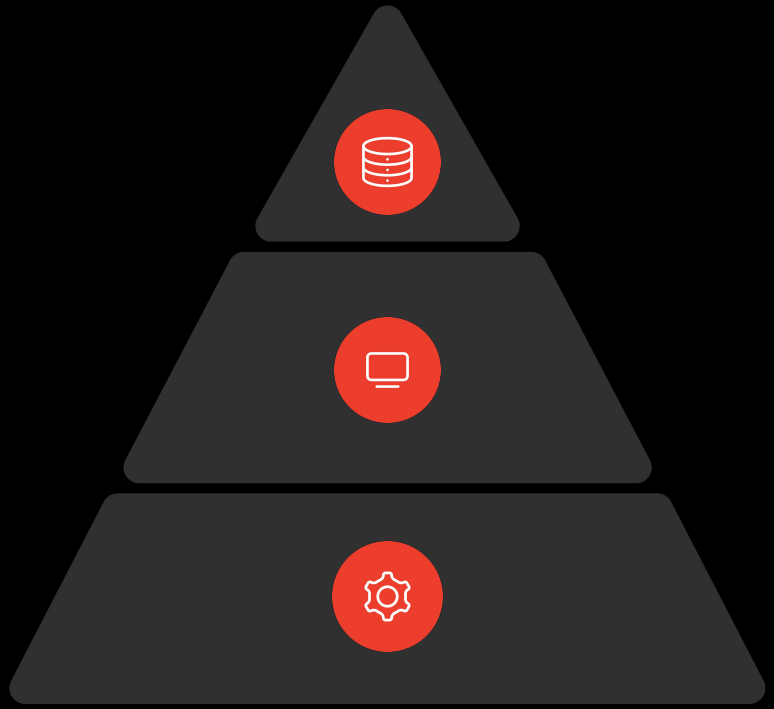
- API
- Exchange/Wallet/Funds/Aggregator Integration

Risk Intelligence Platform

- Dashboard
- Monitoring & Analytics
- Public Entity Profile

Risk Engine

- Probability of Loss (PoL)
- Risk Models



Risk Infrastructure

Probability of Loss (PoL): The Risk Engine

CORE3's Probability of Loss (PoL) establishes a **standardized risk metric** for digital assets.

PoL aggregates dozens of on-chain and off-chain indicators into a forward-looking score that **quantifies the likelihood of financial loss.**

Unified Risk Standard

One Global Benchmark

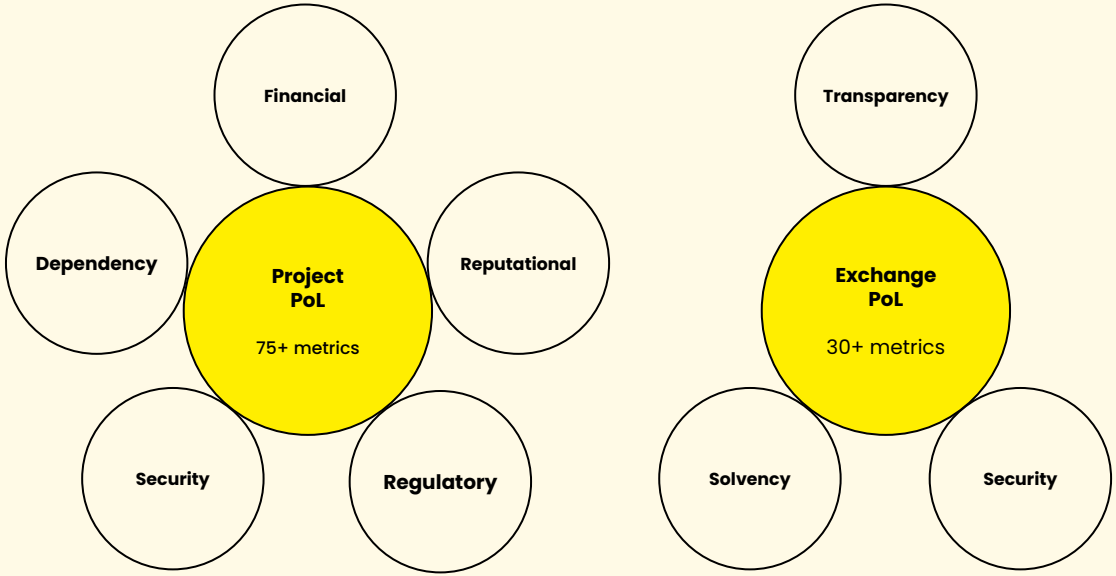
Data-Driven Oversight

128+ verifiable risk indicators

Dynamic Risk Scoring

Scores update as underlying risk indicators change

CORE3 Risk Dimensions



Risk Infrastructure

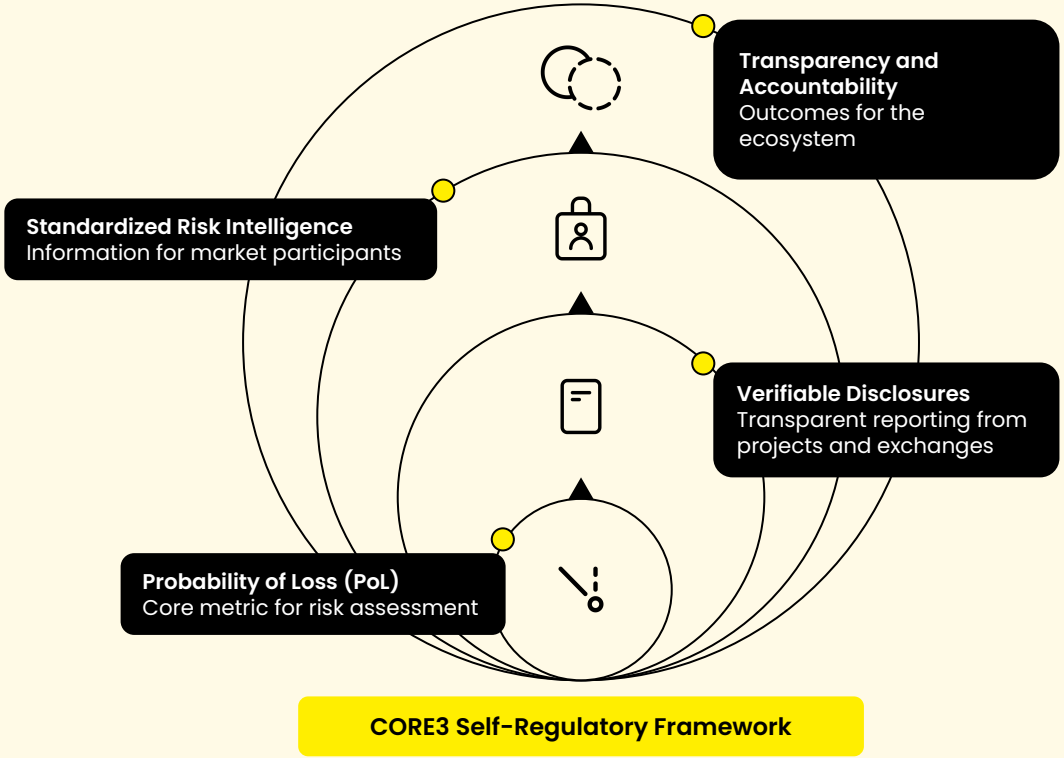
Enabling Transparency & Driving Accountability

CORE3 applies Web3's decentralized ethos to introduce an **open, self-regulatory risk framework.**

Built around the Probability of Loss (PoL) metric, the framework combines **verifiable disclosures including on-chain and off-chain indicators** from projects and exchanges to produce standardized risk intelligence for the ecosystem.

Because risk scores and indicators are **publicly visible**, projects and exchanges are **incentivized to improve transparency** by submitting verified disclosures.

This **creates market pressure to strengthen security, solvency, and governance standards** across the ecosystem.



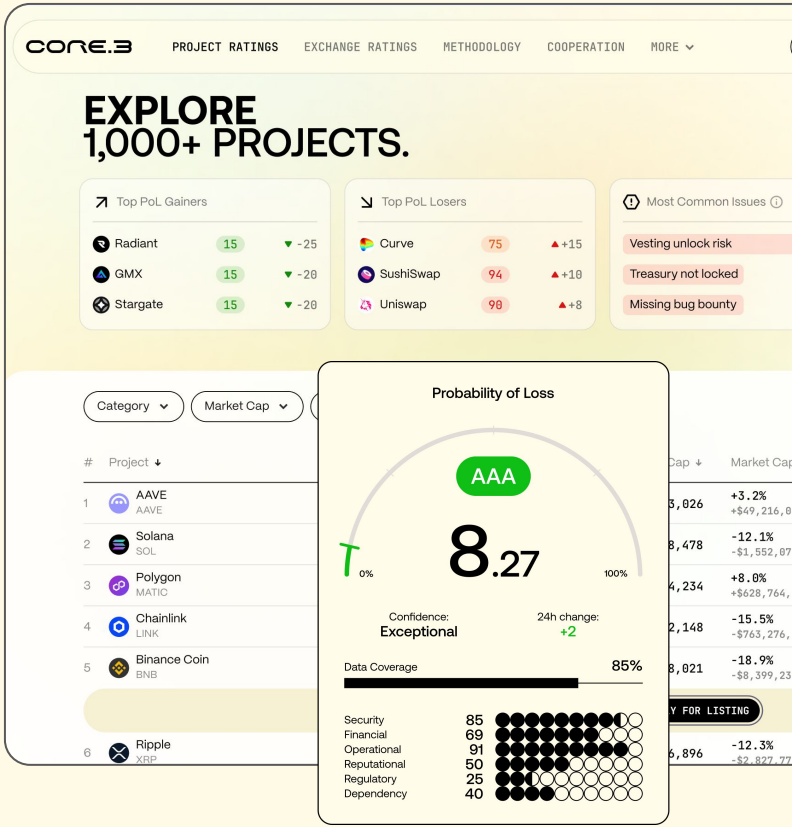
Risk Infrastructure

Risk Intelligence Platform

CORE·3

CORE3 transforms **raw risk signals into actionable intelligence:**

- **Unified Risk Dashboard**
  Explore and compare risk profiles across projects, exchanges, and protocols.
- **Real-Time Monitoring**
  Continuous updates track risk changes as new data and signals emerge.
- **Transparent Risk Profiles**
  Clear sub-scores across all risk metrics.
- **Improvement Insights**
  Actionable recommendations that help entities improve their risk standing.



D+30

What will be Shipped in 30 Days

CORE·3

In Scope

- Probability of Loss (PoL) scoring model
- Risk scoring for initial set of exchanges & protocols
- CORE3 dashboard (Basic UI)
- Public risk profiles with sub-scores

Out of Scope

- Full market coverage
- Advanced AI-driven modeling
- Institutional-grade APIs

Success at D+30

- 500+ entities scored and live
- Functional dashboard accessible to users
- PoL scoring validated on real data

Roadmap

Execution Plan

CORE·3

Week 1
Foundations

- Define PoL scoring logic
- Identify data sources (on-chain + off-chain)
- Architecture & system design

Week 2
Core Build

- Develop scoring engine
- Integrate key risk indicators
- Backend infrastructure setup

Week 3
Product Layer

- Build dashboard UI
- Generate risk profiles & sub-scores

Week 4
Deployment

- Validate scoring outputs
- Add notification system
- Documentation & final polish

Leadership

Domain Expertise

CORE·3

Dmytro Budorin
Founder & CEO

Group CEO of HAI Group, the parent company of Hacken, HackenProof, and Extractor.

Aimann Faiz
CBDO

Head of Business Development at CoinGecko for six years driving revenue, partnerships, and market expansion.

Oleksandr Iurkin
Marketing Director

Marketing strategist with 10+ years of experience in market creation, narrative strategy, and ecosystem growth across Web3 and cybersecurity.

Alexander Shmyrkov
Technical Director

Engineering leader with 5+ years of experience overseeing development, architecture, and delivery across Web3, mobile, and platform infrastructure.

Dmytro Tarasiuk
Product Director

Product expert with 5+ years in asset management, leading Proof of Reserves and CER.live at Hacken.

Summary

Why CORE3?

CORE·3

Web3 **lacks standardized risk frameworks.**

CORE3 makes risk **measurable, comparable, and actionable.**

Proven Team	Built on Proven Infrastructure	Immediate Impact
Built and scaled Web3 security and risk rating systems (Hacken, CER.live), and led revenue and partnerships at CoinGecko.	Leveraging existing datasets, methodologies, and integrations to accelerate delivery. Pilot already live with 50+ entities scored.	With a live PoL risk engine, CORE3 will deliver risk coverage across key Web3 entities - enabling smarter, data-driven decisions for market participants.

CORE3 is already in development, with the foundations in place to deliver a live risk infrastructure layer for Web3 within 30 days.
